

**SEMINAR:** MISA scientist Dr John Carragher's work is helping to open lucrative new markets for live rocklobster exports by extending their transport "survivability".

## Marine science focus in Port Lincoln

THE latest innovations in marine science supporting industries on the Eyre Peninsula will be highlighted at a public seminar in Port Lincoln next Tuesday, October 2.

The seminar, presented by Marine Innovation SA (MISA), will be supported by a display in the Rotary Gallery of research projects that are based at the Lincoln Marine Science Centre involving MISA partners - Flinders University, SARDI, PIRSA and TAFE SA.

It will look at why Port Lincoln is the national focus for Australia's aquaculture production and innovation, the sustainability of our wild fisheries, protecting our marine resources from pests and diseases and the exciting new tools that are being used to ensure the seas remain clean and green.

Tertiary and vocational training opportunities available to the region's current and future generations will also be discussed, as well as an update

on the \$6.6 million expansion of the Lincoln Marine Science Centre, and Port Lincoln's critical role as a future centre of excellence in marine science research.

The free event will be in the Nautilus Theatre from 5pm-6.30pm, with the formal presentation starting at 5.30pm.

Marine Innovation SA aims to position South Australia as a world class centre for marine science, education and industry development.
